## Brief Profile

My research interests lie at the intersections of **artificial intelligence**, especially areas like natural language processing and artificial life, and **high performance computing**. In addition to academic background I have strong software development skills and experience.

## Education

2010-2014 Ph.D., Tokyo Institute of Technology, Graduate School of Information Science and Technology, Tokyo.

Thesis title: "Memory-Conscious Optimizations for Sorting and Sequence Alignment for Massively Parallel Heterogeneous Architectures."

2000-2005 Specialist degree (M.Sc. equivalent), Moscow State University.

Thesis title: "Semantic Pseudo-Code: Approach to Meaning-Base Search."

## Employment History

2018.06-onwards **Invited Researcher** at *AIST-Tokyo Tech Real World Big-Data Computation Open Innovation Laboratory (RWBC-OIL)*

2018.04-onwards **Researcher** at *Tokyo Institute of Technology, School of Computing, Department of Mathematical and Computing Science*

2018.01-onwards **AI consultant**, self-employed

2014.04-2018.03 **Researcher** at *Tokyo Institute of Technology, Global Scientific Information and Computing Center*.

2005.06-2010.05 **Lecturer / Senior Lecturer** (from 2008) at *Moscow State University* (Sevastopol Branch, <http://www.msusevastopol.net/>), Programming Department.

2006.09-2009.06 **Software Architect and Developer** at *Outsourcing Ukraine* (<http://www.outsourcing-ukraine.com/>), Sevastopol

## Fellowships and Grants

- JSPS KAKENHI Grant number JP17K12739 adopted FY 2017: "Corpora on Demand: Scalable Methods of Obtaining Linguistic Data".
- Japanese Government (Monbukagakusho) scholarship for conducting PhD research 2010-2014.
- 2018 TSUBAME 3.0 Grand Challenge: 2000 GPU/days for scalable deep learning study.
- 2018 ABCI Grand Challenge: 4000 GPU/days for scalable deep learning study.

## Software Development and Other Relevant Skills

I stay passionate about software development after moving to academia, continuing to code myself and supervising engineering efforts in related research projects. My toolbox includes:

- **Software Design and Development:** team management, development processes, continuous integration and delivery, object oriented design and patterns.
- **C, C++**, along with such libraries and tools for parallel programming as **CUDA, OpenMP, MPI, OpenCL, TBB**, etc for performance-critical parts.
- **Python** for everything else: high level scripting, quick prototyping and such. Being open-source enthusiast I'm trying to contribute back to the Python ecosystem.
- Application of machine learning techniques - from basic statistical analysis methods to cutting edge deep learning models.
- Databases (SQL and noSQL), web technologies, version control systems, computer algebra and publishing systems etc.

## Community Service

Organized workshops and tutorials:

- "Deep Learning from HPC Perspectives: Opportunities and Challenges" Mini-Symposium at SIAM PP 2018 conference.
- "Distributional Compositional Semantics in the Age of Word Embeddings: Tasks, Resources and Methodology". Tutorial 4 at LREC 2018 conference.

Other activities:

- I have served as a program committee member of a number of conferences and workshops, including NAACL, \*SEM, SC, ISC, PARCO among others.
- From 2017 I serve as one of the organizers of "Tokyo Machine Learning Gym" meetup.

## Languages

Russian	native
English	fluent
Japanese	conversational
Ukrainian	conversational

## Interests

Music	I play cello, guitar, and sing
Photography	Taking pictures of people and events 📧 <a href="http://nightwind.in">http://nightwind.in</a>
Sport	Hiking, mountaineering, martial arts

---

## Extended Profile

- One of my main focus areas is natural language processing / computational linguistics. I was working on old-fashioned semantic parsing in the past, and currently transitioned into the area of representation learning. Alongside with working on my ideas in this area, I've established an international team of collaborators working on related topics and led the development of *vecto* framework: an open-source implementation of our research ideas, with additional focus on reproducibility. Our results include novel and performant methods for constructing embeddings, intrinsic and extrinsic methods for their evaluation, new multi-lingual datasets etc. Please check <http://vecto.space> for more details.
- Another point of strong focus for me is on running deep learning workloads on supercomputers: orchestration/scheduling, scaling, optimization of hyper-parameters etc. This work is mostly performed under the auspice of AIST RWBC OIL. One of the target platforms for this work is ABCI - a 4000 GPU supercomputer purpose-built by AIST for AI workloads. I've been also partially involved in the design of specifications and evaluation criteria for this system. Additionally I collaborate with RIKEN scientists on a topic of creating a deep learning ecosystem for post-K, Japanese ARM-based flagship supercomputer to be deployed around 2020.
- I'm also supervising a number of individual research projects by Tokyo Tech students, on topics ranging from using machine learning to predict performance of hardware platforms and applications to optimizing Python for scientific computation.
- Before that I have been working on artificial life, particularly using evolutionary approaches to discover emergence of communication and swarming behavior. My work was both on the problem domain side (discovering new dynamics in populations) and performance side: using hierarchical space decomposition and parallel programming to accelerate multi-agent simulations.
- My PhD work was about making multi-GPU implementations of algorithmic kernels for processing of big genomic data and sorting.
- Before moving to Japan I had 5 years experience of teaching computer science in Moscow State University. I was responsible for creating materials and teaching courses on operating systems, parallel data processing and computer graphics.
- At the same time I was working as industrial software architect and developer as a part of local team with international clients. The projects I have been involved in range from online trading platform for precious stones and jewelry to embedded software for controlling industrial machinery.
